the

```
The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

epichellum was carefully disserved out of the microtary of the district of the microtary of the micro Pastitrack Kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 23761), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo (dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker-primer and transcribed using moloney murine leukemia virus reverse transcribts was pointed with the linker-primer and transcribed using moloney murine leukemia virus reverse transcribts with Noney murine leukemia virus reverse transcribts with Synthesized with DAA polymerase and RNase H. Complementary bNA was blunt ended with Ffu DNA polymerase, ligated with Ato I. The cDNA was sequentially size fractionated virth Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 by respectively. The cDNA was then directionally ligated to the blage library was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF' cells, the Combinants. Stratagen's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescue library, individual cDNA was estimated to be 11,100,000 recombinants. Stratagen's ExAssist Interference plating from 200 ul of saturated culture with the Charler of the phage interference purified from 200 ul of saturation kit (TWN plasmid DNA from the place interestion of the phage interference plating of the fauturated culture with the Charler of the phage interestion kit (TWN plasmid DNA plasmid DNA place in the Charler plasmid strength BigDye terminator sequencing chemistry (Applied Blosystems, Poster City, CA). Sequencing chemistry (Applied Blosystems, Poster City, CA). Sequencing reactions were performed on MT Terrad thermal cyclers (MT Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Blosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have bits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." Concert96(TM) plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. BSTs from the 8' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25% 61 ATAITTAIGGACCGICTAGCITCCAAGAAGCICTGTGCAGAIGATGAGGTGTGTCTATACT 120 ATTICICIGGCTAGTGCTCAAGAAGATTATAATGCCCCGGACTGTAGATTCATTAACGTT 180 AAAAAAGGGCAGCAGATCTATGTGTACTCAAAGCTGGTAAAAGAAAATGGAGCTGGAGAA 240 1 AIGGCAAGAAIAITGITACTITICCTCCGGGTCTTGIGGCCTGTAIGTGCTGTGCAIGGA 60 7 ArescaAssararrearrerrrectresessectrerestrerraristiscessestaser 66 epithelium was carefully dissected out of the modiolus. over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) and Cloumns to enrich for CDNAs greater than 4000p and 1000 bp the bull of the CDNA was then directionally ligated to the bull of the Uni-22p XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XII Blue MRF' cells, the yield of the phage library was estimated to be 11,00,000 recombinants. Stratagene's Exhasist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid MnA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTS from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry Applied Biosystems, Poster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (M1 Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; as follows: 72% of genes are present in GenBank, but do not have assigned function; 23% have hits in GenBank, but do not have assigned function; 23% have bits in GenBank, but do not have sesigned function; 23% have better and paracterized ESTS and 20% are unidentified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CCCAGGAACTTGGTCAAGGAACAGCGTGTGTACCAGGAAGCTACCAAGGAAGTTCCCACC 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 ATAITTAIGGACCGICTAGCTICCAAGAAGCICIGIGCAGAIGAIGAGGTGTGTATACI 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                65 grártrahdésáraaactructroraasaakorrerigrésésésérésésérérérérek 124

             FEATURES
strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on My Terrad thermal cyclers (My Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72 of genes have 1 copy; 14.38 2; 128 3-10; 1.48 11-50 and 0.18 51-150. As to gene function, 45% of genes are present in GenBank and have know function, 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BQ569741 560 bp mRNA linear EST 19-JUN-2002 gil35f01.yl Mouse Organ of Corti cDNA pBluescript Mus musculus cDNA clone gil35f01 5', mRNA sequence.

/clone 11b="Wouse Organ of Corti; Vector: ppluescript"
/clone 11b="Wouse Organ of Corti; Vector: ppluescript; The
organ: Organ of Corti; Vector: ppluescript; The
organ of Corti; (10C) was fine dissected from a total of 386
OC as follows: 10C samples from post-natal (10) day 5; 72
from pto 2 and 24 from pto 18 from pto 20 from pto;
from pto 2 and 24 from pto 18 from pto 20 from pto;
from pto 2 and 24 from pto 3; 18 from pto 20 from pto;
from pto 2 and 24 from pto 3; 18 from pto 20 from pto;
from pto 2 and 24 from pto 3; 18 from pto 20 from pto;
from pto 2 and opened in Leibowitz medium. The bony
capsule of the cochiea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
pital ligament were removed and the sensory
for all RNA was extracted using the micro Fasttrack kit
(catalog # K1593-02; Invitrogen; Carlebad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 23721), Stratagene) and Uni-Zap XR
dispace from Stratagene (La Jolla, CA, USA), according to
manufacturer's instructions. Briefly: 15; up mRNA was
interpreted a sinstructions. Briefly: 15; up mRNA was
primed with the linker- primer and transcribed using
primed with the linker- primer and transcribed using
primed with the linker- primer and transcribed using
monory murine leukemia virus reverse transcribed using
primed with Mol. I The CDNA was sequentially size fractionated
voer pharmacia Size Sep400 (Pharmacia, Ungapeta)
and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA)
and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA)
and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA)
and Clontech Alto, which had been predigested with
Ecok I and Xho I. The phage inharavy was estimated to be 11,100,000
recombinants: Stratagene's Exassist Interference
resistance helper phage (catalogue # 211203) was adopted
resistance helper phage (catalogue # 21203)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on Mu Tetrad thermal cyclers (Mu Research, Maltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11.50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank and not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 560;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 287; DB 13;

and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack Kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR digapack III Gold Cloning kit (catalog # 237612), both from Stratagene [La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using boloney murine leukemia vitus reverse transcribed using boloney murine leukemia vitus reverse transcribed using synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with PG DNA polymerase, ligated with BCOR I adapters in the presence of ligase and digested with RNO I. The CDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Dpsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with ECOR I and Xho I. The phagemid was packaged with Green Planta Columns to enrich for cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with ECOR I and Xho I. The phagemid was packaged with Green Planta Columns to enrich for cDNA was then directionally ligated to resouch library was estimated to be 11,100,000 recombinants: Stratagene's EARsist Interference resistance helper phage (catalogue # 21203) was adopted to rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate; Plasmid DNA from the phages. Upon plating of the phage instructed by the manufacturer. ESTE the careful paramid purification of the CDNA valuniants of the S' end of the CDNA clones were generated with the bull was a instructed by the manufacturer. STF from the S' end of strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on My Tetrad thermal cycless (Wy Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have bits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."

/clone lib="Mouse Organ of Corti; Vector: pBluescript" The
/clone lib="Mouse Organ of Corti; Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bull
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total NAW was extracted using the micro Fasttrack kit
(catalog # K1593-02; Invitrogen, Carlsbad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
digapeck III Gold Cloning kit (catalog # 237212), both
from Stratagene (La Jolla, CA, USA), according to
manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo(df) linker-primer
that contains an Xho I site. First strand synthesis was
primed with the linker- primer and transcribed using
Moloney mutine leukemia wirus reverse transcribed using

with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo, Alto, Ab) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Giapak III Gold and, upon tiration on XL1 Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference dresistance helper phage (stanlogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescue plasmid DNA from the phages. Upon plating of the crescue plasmid DNA from the phages. Upon plating of the concerts(TM) plasmid purification kit (Invitrogen, Concerts(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (AccGAAACAGCTATGAC) and 25% strength BigDye terminator sequencing reactions were performed on M1 Terrad thermal cyclers (M1 Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPF polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy: 14.3% 2; 12% of genes are present in GenBank and have know function, 45% of genes are present in GenBank and have sasigned function; 12% are uncharacterized ESTS and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BB611549 BIKEN full-length enriched, 13 days embryo head Mus musculus cDNA clone 3110083012 5', mRNA sequence.
